"WERE I to pray for a taste which should stand me in stead under every variety of circumstances, and be a source of happiness and cheerfulness to me during life, and a shield against its ills, however things might go amiss, and the world frown upon me, it would be a taste for reading. Give a man this taste, and the means of gratifying it, and you can hardly fail of making him a happy man; unless, indeed, you put into his hands a most perverse selection of books. You place him in contact with the best of society in every period of history; with the wisest, the wittiest, the tenderest, the bravest, and the purest characters who have adorned humanity. You make him a denizen of all nations, a contemporary of all ages. The world has been created for him."—*Sir John Herschel.*

Sciatica, Inflammatory and Chronic Rheumatism, Neuralgia, Gout and Spinal Complaints can only be effectually cured through the blood.

For Ulcers and Eruptive Diseases of the Skin, Postules, Pimples, Blotches, Boils, Tetter, Scald Head and Ringworm, VEGETINE has never failed to effect a permanent cure.

For Pains in the Back, Kidney Complaints, Dropsy, Female Weakness, Leucorrhoea, arising from internal ulceration, and uterine diseases, and General Debility, VEGETINE acts directly upon the causes of these complaints. It invigorates and strengthens the whole system, acts upon the secretive organs, allays inflammation, cures ulceration, and regulates the bowels.

For Catarrh, Dyspepsia, Habitual Constiveness, Palpitation of the Heart, Headache, Piles, Nervousness, and General Prostration of the Nervous System, no medicine has ever given such perfect satisfaction as the VEGETINE. It purifies the blood, cleanses all the organs and possesses a controlling power over the nervous system.

The remarkable cures effected by VEGETINE have induced many physicians, and apothecaries, whom we know, to prescribe and use it in their own families.

In fact, VEGETINE is the best remedy yet discovered for the above diseases and is the only reliable

BLOOD PURIFIER

yet placed before the public.

Vegetine.

Prove its Efficacy.

TORONTO, ONT., April 5, 1880.

The sale for the VEGETINE, since we commenced to keep it, has steadily increased, and to prove its efficacy, parties who once take it generally repeat the purchase of it, and in one case the customer took a dozen bottles with him, as he was going abroad, to make sure of having it.

Speak very Highly of it.

TORONTO, ONT., April 5, 1880.

I have great pleasure in recommending VEGETINE to the public, as the best blood purifier that has ever been offered for sale, and all to whom I have sold any speak very highly of its purifying qualities.

The Best Blood Purifier.

TORONTO, ONT., March 25, 1880.

We have found an increasing demand for VEGETINE, and believe it the best blood purifier in the market. That it meets its requirements is evinced by many of our customers returning for more. We have therefore much pleasure in recommending it.

Pleasure at Selling it.

TORONTO, ONT., March 27, 1880.

We never recommended a new patent medicine until some of our customers, who have tried it, bear personal testimony to its value. Many of our customers well known to us have repeatedly bought VEGETINE and speak very highly of it, therefore we have great pleasure in selling it, knowing that we are giving good value.

SAVE YOUR COAL !

J. W. ELLIOT'S

PATENT SAVER !

THE FIRST OBJECT—Is to produce the greatest amount of heat from a given amount of fuel, and is gained by an arrangement of the three-way draft passage and some twelve feet of flue pipe, which is bent down and around the base. This device is also applied to Wood Stoves, and the heat is absorbed by the atmosphere through direct radiation from every part of the Stove. Another object of the invention is to secure for heating purposes the greatest possible benefit to the fire contained in the Stove, and consists in placing around the body of the Stove a series of internally projecting pockets overlapping the fire pot, and so formed that the air of the room is admitted into the lower end of the pockets, and, after passing through them, re-enters the room, having become intensely heated through contact with the inner sides of the said pockets, which are immediately over the hottest part of the fire, thereby producing far greater results from a GIVEN AMOUNT OF FUEL THAN ANY OTHER STOVE.

AN EVAPORATER WHICH IS A PART OF THE STOVE—The cover becomes a water tank, and is an effective evaporator ; the pivot on which it turns is an iron tube screwed into the base of the tank, while the lower end is closed and rests in a pocket inside the dome, thereby producing a greater or less amount of vapor in proportion to the intensity of heat.

THERE IS A DOUBLE HEATER by means of which heat can be conveyed to an apartment above, and supplied with sufficient vapor from the tank.

A COMBINED HOT AIR AND STEAM BATH can be obtained by closing the damper in the water tank, and causing all the vapor to mingle with the ascending heat.

THE STOVE BECOMES SIMPLIFIED AND EASY TO CONTROL—All hinged doors and objectionable fittings are abandoned, and are replaced by mica lights with metal tips attached, by means of which the mica can be sprung into its place, or removed and cleaned with a dry cloth, or replaced when the Stove is red-hot, without burning one's fingers. At the base of the mica little eyelets are placed, through which a constant flow of air causes all the gas or smoke to be consumed or to pass off.

A BASE PLATE of cast iron in the place of zinc or other perishable material. The base plate is raised sufficiently for the cold air on the floor to pass up through its raised and hollow cone-shape to the stove, and is rarified ; by this means a constant circulation is continued until at even summer heat is obtained. The circulation above described causes the floor to remain cool underneath the Stove. The Stoves are altogether cast iron ; the slow consumption of fuel, and the direct radiation from all its heated surface, ensures their lasting any number of years and prevents any clinkers or waste.

There are two grates similar in form to the base of a circular basket ; the centre grate is rotated to the right or left by the lever a short distance, and by moving the lever still further to the right or left both grates are worked.

In relighting the fire there is no dumping or screening of the coal required and no waste whatever.
